

**Oakland
Excelsior**

M & VM RANGE

A separate machine room is not required as the gearless drive unit is located within the lift shaft & the control panel is mounted in the landing door frame.

The M & VM Range is ideally suited to a wide variety of applications including commercial & residential developments, and is fully compliant with BS EN81-70 (Part M Building Regulations).

DRIVE UNIT

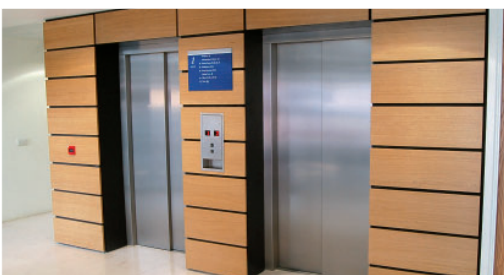

The compact & energy efficient gearless drive unit is mounted on top of the lift guides, reducing the structural building costs by transferring the loads to the pit.

LANDING ENTRANCE INCORPORATING CONTROL CABINET

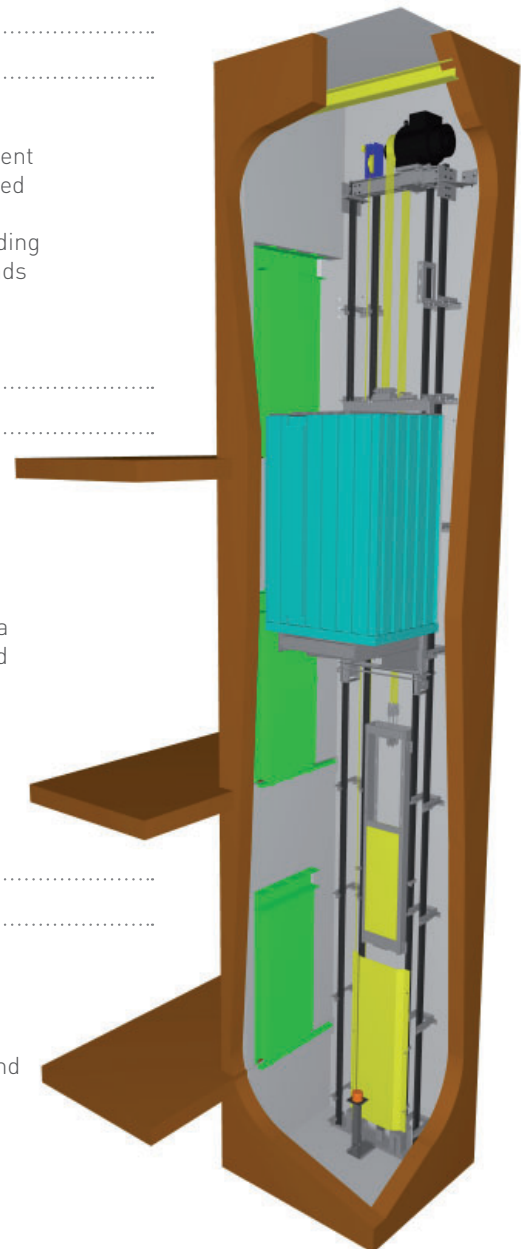

Electronic controls for the lift system are enclosed in a purpose-designed extended landing door frame at the upper landing level.

LANDING ENTRANCE

Standard entrance frames are included at the lower and intermediate levels.

M RANGE

Customisable designs offering flexible solutions with a wide range of optional extras.

Key features:

- 8, 10 & 13 person capacities
- 0.63m/s or 1.0m/s
- Low noise
- High energy efficiency
- Up to 180 lift starts per hour
- Self-supporting structure option
- BS EN81-70 (Part M Building Regulations)
- Scenic option available

VM RANGE

Cost-effective pre-engineered solution with a range of optional extras.

Key features:

- 8 person capacity
- 1.0m/s
- Low noise
- Up to 150 lift starts per hour
- BS EN81-70 (Part M Building Regulations)

Whilst being extremely space-efficient, the machine-room less type traction lift is not suitable for all applications and environments.

Oakland also provides a range of hydraulic passenger lifts, and so can offer the most appropriate drive solution for your particular application – please call us to discuss.

CONTACT DETAILS

We have sales consultants throughout the UK mainland, who are able to offer advice and assistance at a local level.

Please call us to discuss your requirements in greater detail.
