# VM2 Passenger Lift Cabin Finish Options

## Oakland Excelsior VM2 Cabin (630Kg/8 Person Lift with open front arrangement shown)

The Oakland Excelsior VM2 lift product is a range of Electric Traction Machine-room less passenger lifts incorporating some of the very latest lift technology. The product is a cost effective pre-engineered solution aimed at the competitive 8 person / 12 person and 13 person markets.

The Lift comes in a variety of styles: -

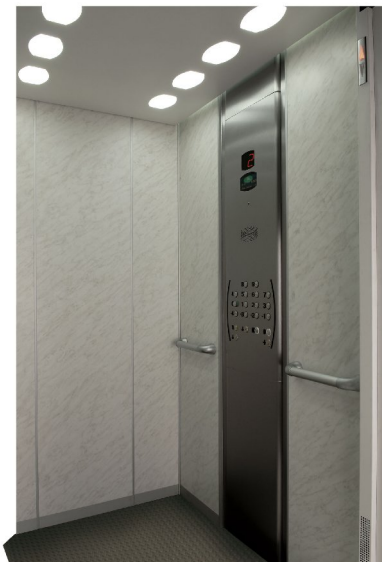

- Skinplate (vinyl coated sheet steel)
- Stainless Steel
- Laminate

Each style has a number of ceiling and floor options.

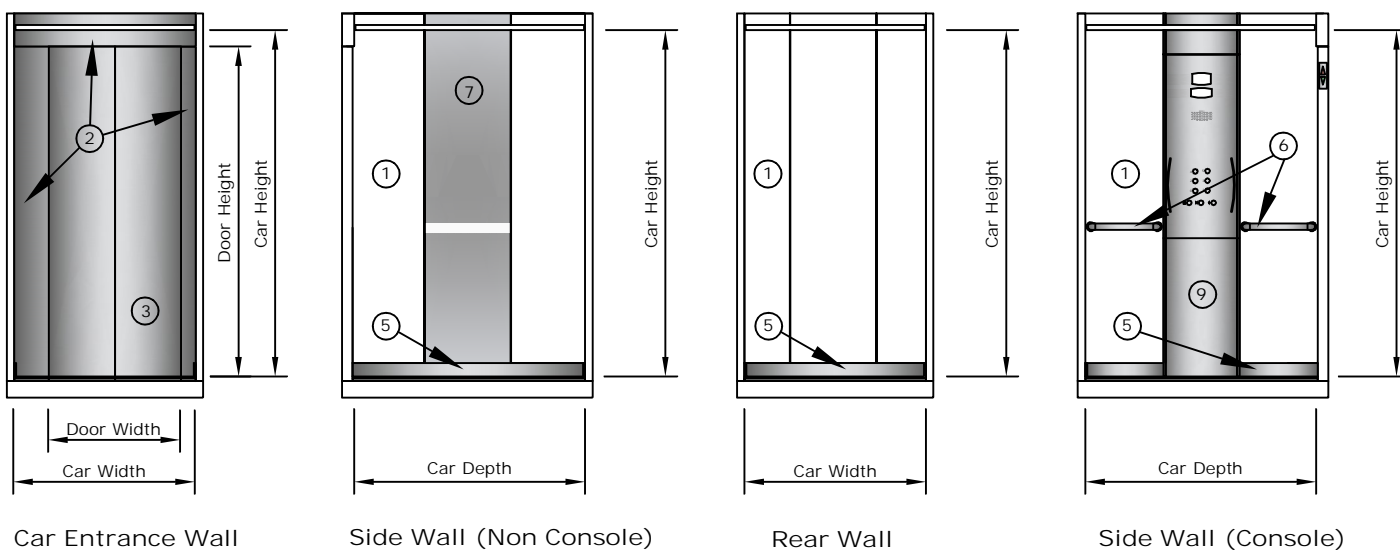

For further details to the standard capacities and loadings associated with each range, we ask you to refer to our dimension charts which are downloadable from our website at [www.oakland-excelsior.co.uk](http://www.oakland-excelsior.co.uk)

All the Oakland Excelsior VM2 Passenger Lifts comply with document M of the building regulations. To satisfy this regulation, the lift must have a number of features. For further information on DDA compliance please contact your area sales consultant and request a copy of our document D64 "Lifts and DDA - Requirements of the Building Designer".

If you cannot find what you are looking for in this package, please refer to our M Range cabin finishes brochure from the website, where we have more flexibility and can customise the lift to your requirements.

Typical open front laminate car arrangement  
(8 person / 630 Kg capacity white carrara laminate car shown)
